## **Chartered Institute of Personnel Management - Associate Member (ACIPM)**

April 2022

## **Human Resources Management - Obafemi Awolowo Consultancy Services Centre and Ultra Brains Institute of Information Technology.**

July 2018

## **Projects**

### **MovieVerse**

MovieVerse, my latest and an ongoing project, is a movie-themed website built with NextJS and Tailwind CSS. Through this project, I skillfully demonstrate my ability to make API requests in a responsive user interface and server side vs client side rendering. Utilizing the TMDB API, this project features a database of hundreds of movies.

### **Portfolio Website**

My favorite project built with NextJs and showcasing my pure CSS skills represents my creativity and familiarity with NextJs framework. Inspired by a Behance design and infused with my own artistic flair, this website incorporated Context API, Framer Motion, Splide, Routing, Formspark AND CSS Modules. It demonstrates my diverse skills as a web developer/creative designer. Feel free to explore my projects from web development to UI/UX and Graphics.

### **Betting App**

Demonstrating my routing and authentication skills through an interactive ReactJS-based Betting App with an integrated Stripe payment processor and a google sign in feature. With design inspiration from a figma project, this project shows my proficiency in building dynamic user interfaces using Styled Components and framer motion.

### **WalletNode**

Dummy Decentralized Cryptocurrency Application is a responsive app built with ReactJs and CSS(Styled Components) that explores the world of digital assets. I've integrated a live chat software (tawk) to facilitate real-time communication between users and customer support and a backend Forms service: Formspark that submits form details to developer's email address.

### **FoodOnline**

An extensively interactive e-commerce restaurant built with CSS Modules and ReactJs that allows users place orders and add items to their cart for a smooth checkout experience. It's focused mostly on functionality and user-experience. As my first ReactJS project, it showcases my familiarity with context providers and state management.

### **Advt.**

Advt is a dummy online gadget store built with pure Html,CSS and Javascript. This was my first full website and showcases my mobile responsiveness skills, eye for details and commitment to a pixel perfect design. Advt is a user-friendly website with a minimalist yet visually appealing design.

### **Deliciouss**

Deliciouss is a code-along food and recipe site built with ReactJs and CSS. This website was built with the Spoonacular API and demonstrates my routing and data fetching abilities. Leveraging

the power of the Spoonacular API, this platform allows you to explore a vast array of food, pastries, and recipes in a user-friendly and responsive interface.

### **Acme Rockets**

Built with TailwindCSS and Html, this is a code along basic website that showcases my knowledge on mobile responsiveness, dark and light themes and TailwindCSS

### **TIC-TAC-TOE Game**

This was a game I built very early on demonstrating my knowledge of pure javascript and interactive components.

### **Expenses App**

This is a code-along project that helped ground my react skills on passing up/down props, rendering components and handling input forms. This practical application allows users manage their expenses effectively, highlighting my ability to build functional and user-friendly web applications.

### **UI/UX and Graphic Designs:**

I designed several websites, landing pages, fliers and image manipulations with Figma, Photoshop and InDesign tools. Creativity makes me happy and bringing these designs to life enhanced my creative and design skills. A few were built with tutorials, most were built solely by me with inspiration from behance/dribbble and a couple others were my design ideas from scratch.
